

NEW
BARUDAN
EMBROIDERY
MACHINE DESIGNED
FOR IMPROVED
CAP PRODUCTION

Macpherson introduces Barudan's new E-series cap machine—a multi-head embroidery machine created for high-speed production on finished caps, as well as flat goods.

FAST AND EASY CONVERSION

The E-series machine has been designed for fast and easy conversion from flat goods to finished caps. In fact, Barudan's new cap machine can be completely converted by a single operator in less than 30 minutes. Equipped with a counter weighted spring, the machine's sewing table moves up and down with minimum effort from the operator. Cap frames can then be added or

removed quickly and easily.

CAP FRAME

An optional and profitable machine accessory, Macpherson's cap frame allows you to embroider finished caps with top quality results. For maximum productivity, caps are framed off the machine. While the machine is in operation, the operator frames additional caps on a separate framing table. As soon as the design is completed, blank framed caps can be quickly snapped into

place for the next run.

COMPUTER OPTIONS

Basically a modified version of Barudan's established multi-head machines, the E-series machine can be customized to suit your individual needs by allowing you to choose from Barudan's basic BEMS features to the more advanced BEMR features.

BEMS/BEMR Features*

174,000 stitch memory
Built-in 3.5" floppy disc drive
40-character, 2-line LCD display
Menu selection

Additional BEMR Features*

12" CRT color monitor
Stitch Processing

*For complete information on Barudan's BEMS and BEMR machines, see appropriate machine brochure.
